

Service Plan

Getting the most out of your System

Proper maintenance and inspections are key to longevity and efficient operation. What's more, opportunities for improvements, upgrades or refurbishments keep performance and technologies up to date in every way.

Our team is capable of procuring any and all parts associated with your system, helping you have what you need, when you need it. Service technicians are available to be on-site for proper installation and maintenance to ensure smooth transitions during shutdown periods.

- **Field Service & Inspection**

Zenviro Tech's qualified Service Technicians are ready to help your team keep your system at top performance. Our technicians provide best practices and experience for proper maintenance, leading to reduced costs over the life of the system.

- **Spare Parts & Maintenance**

To keep production up and running at peak performance or in case of an emergency, we support you on spare parts management. Regular inspections determine the current condition of your system and identify potential improvements.

- **Plant Upgrades and Optimization**

Over time, production targets change, throughput increases and upgrades are developed. Our team is ready to review your systems and offer recommendations to optimize performance.

- **System Rebuilds**

As systems age, rebuilding portions of the system can significantly extend the useful life. Our Engineering and Service teams work closely with customers in assessing your needs, from evaluations to economic plans of action. We offer the same performance guarantees for rebuilds as for new equipment.

Field Service Overview

Zenviro Tech's Service Plan includes an on-site visit by a service technician, typically lasting 1-3 days. It is recommended to schedule a service visit at least once every 12 months for Zenviro Tech supplied equipment. This will ensure sufficient planning for upcoming turnarounds (preventative maintenance) and catch issues before they become critical.

Standard Services

- ✓ Safety Walkthrough
- ✓ Visual System Inspection
- ✓ Maintenance & System Repair Supervision
- ✓ Optimization & Troubleshooting
- ✓ Key Components Inspection
- ✓ System Parameters Check
- ✓ Follow-up Report & Recommendations
